

I BUILT A DAY OPERATING SYSTEM.

Because real life doesn't follow your schedule.

YOUR PLAN WAS PERFECT.

Until reality happened.

One delayed task can break the rest of the day.

PLANNED TIMELINE

- 09:00 AM Coding Focus Block
- 10:30 AM Design Review
- 11:30 AM Lunch & Movement

→
REALITY
COLLISION

REALITY TIMELINE

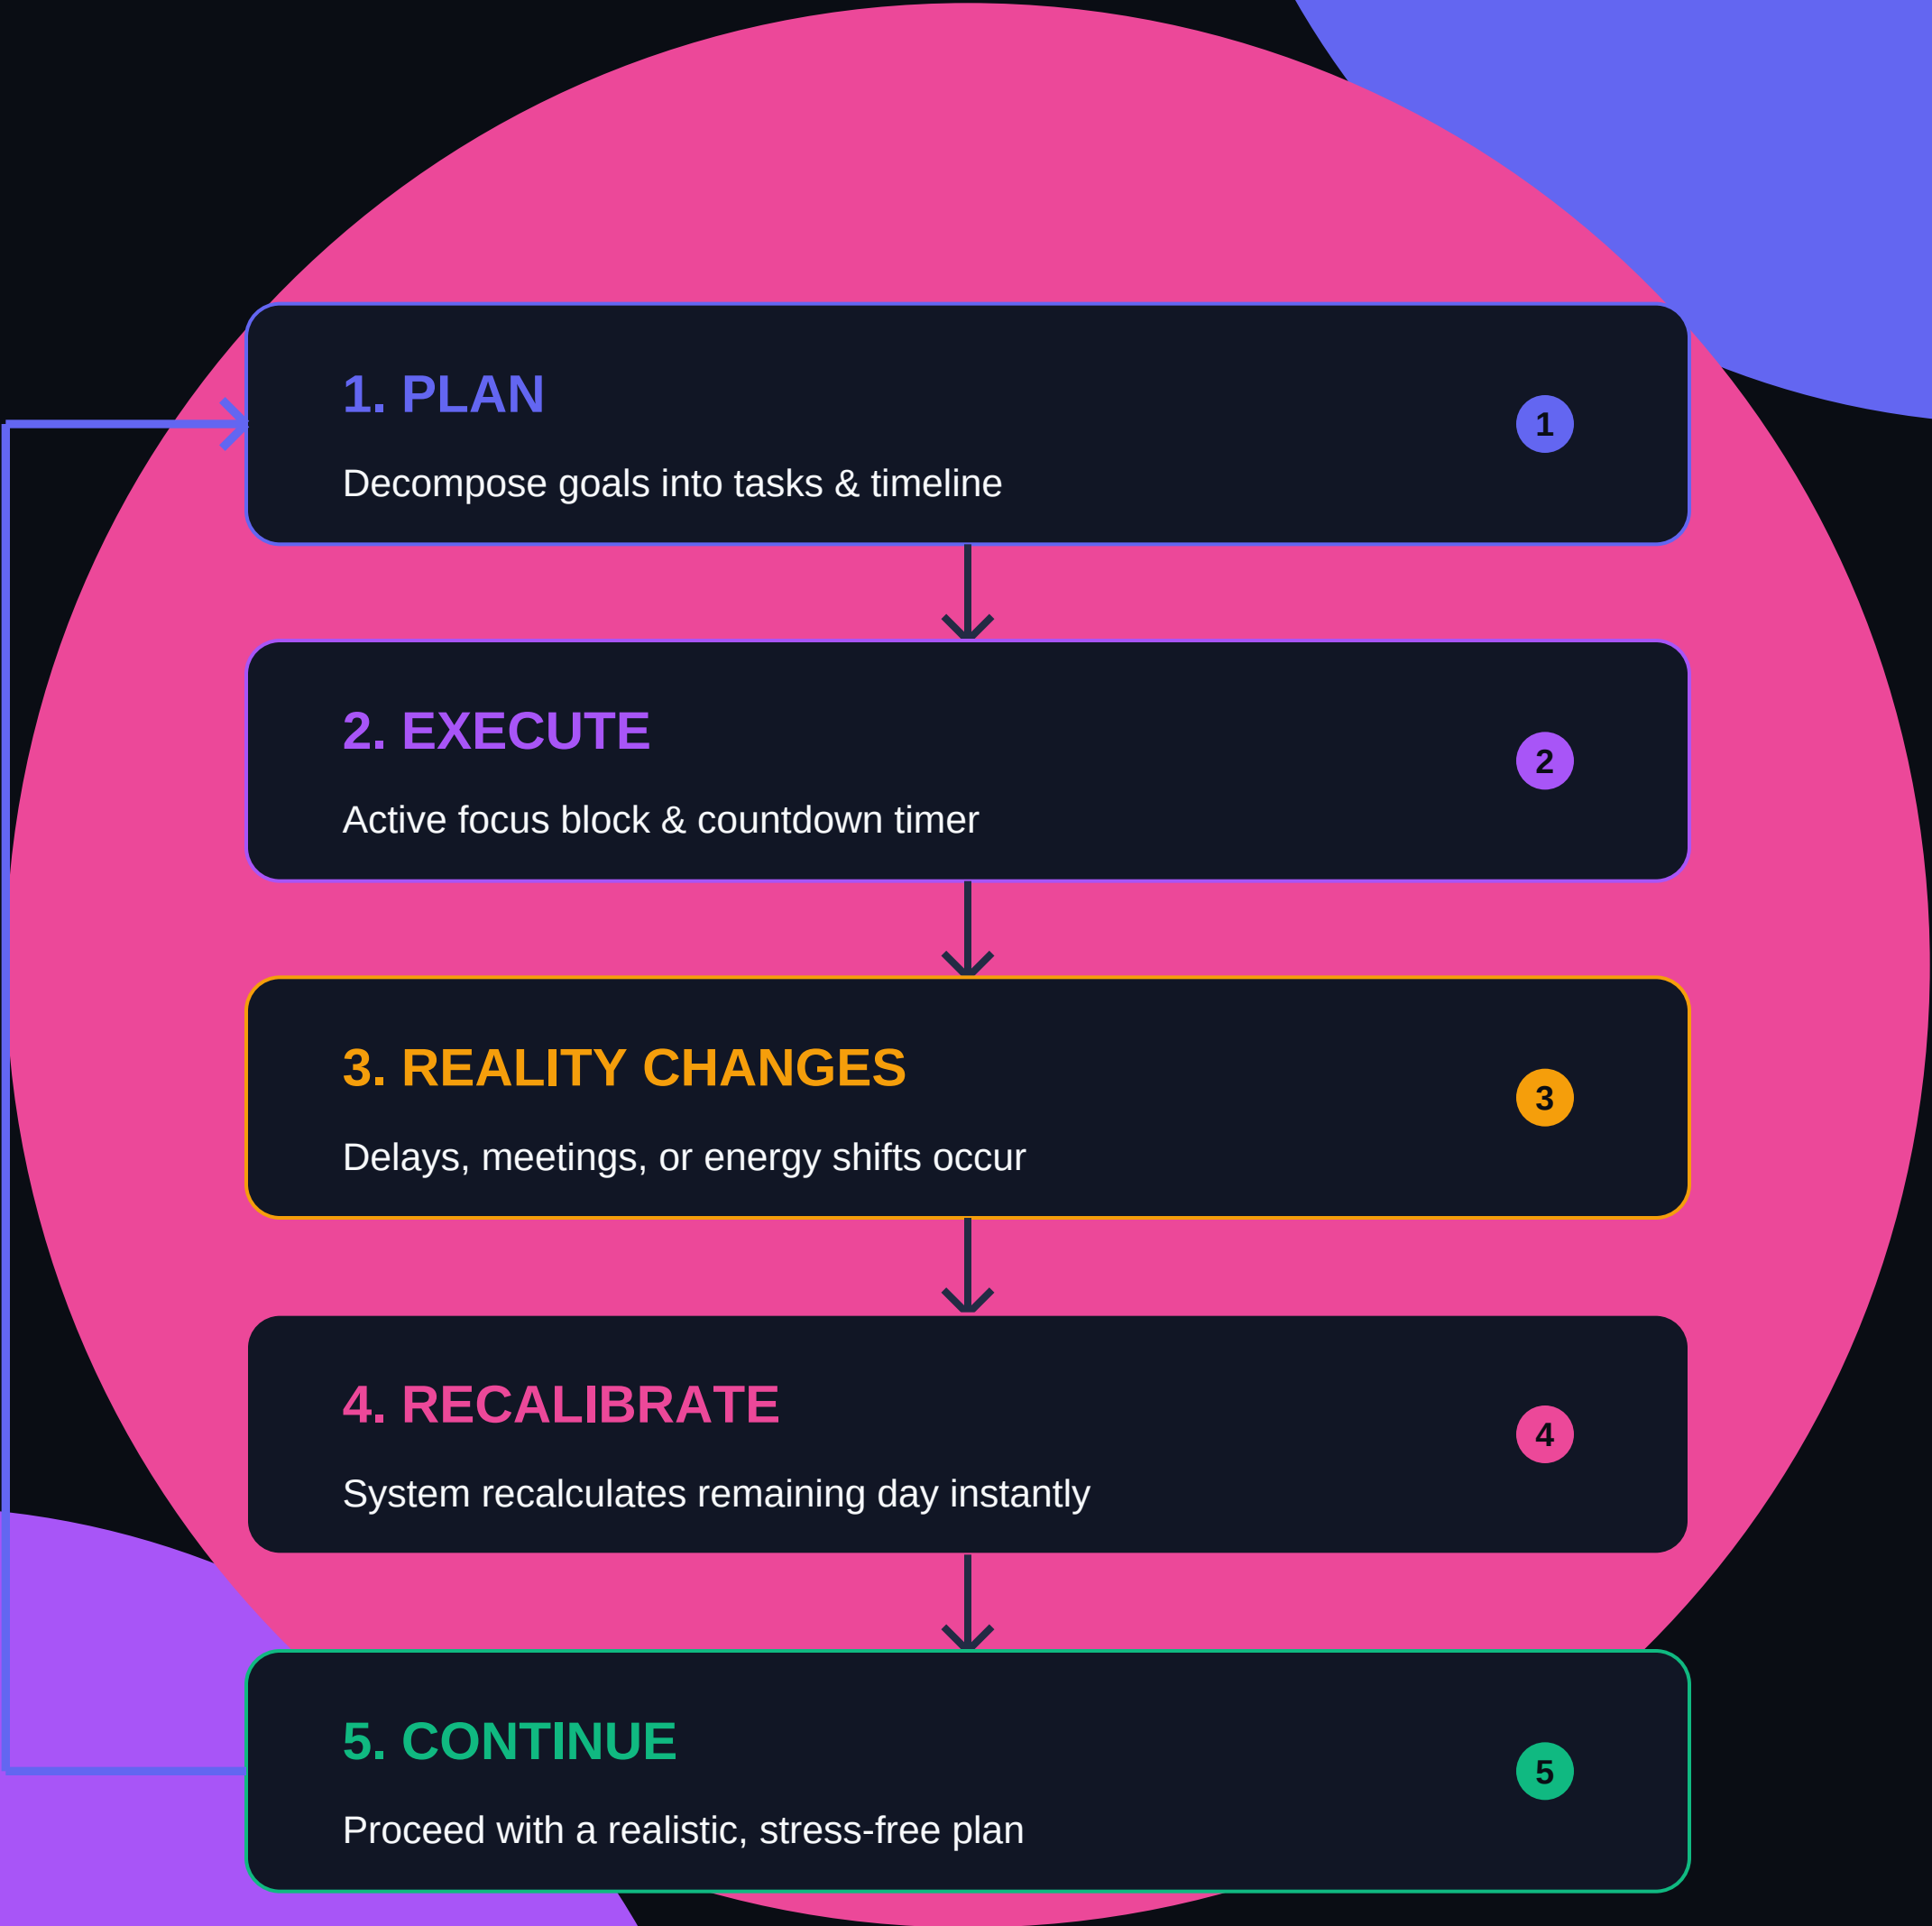

- Coding sprint took longer than planned
- 11:15 AM Design Review (Delayed)
 - 12:15 PM Lunch & Movement (Pushed)

Static planners break. FlowOS recalculates.

When one delay pushes everything else, FlowOS shifts the schedule while protecting your hard bedtime and circadian recovery windows.

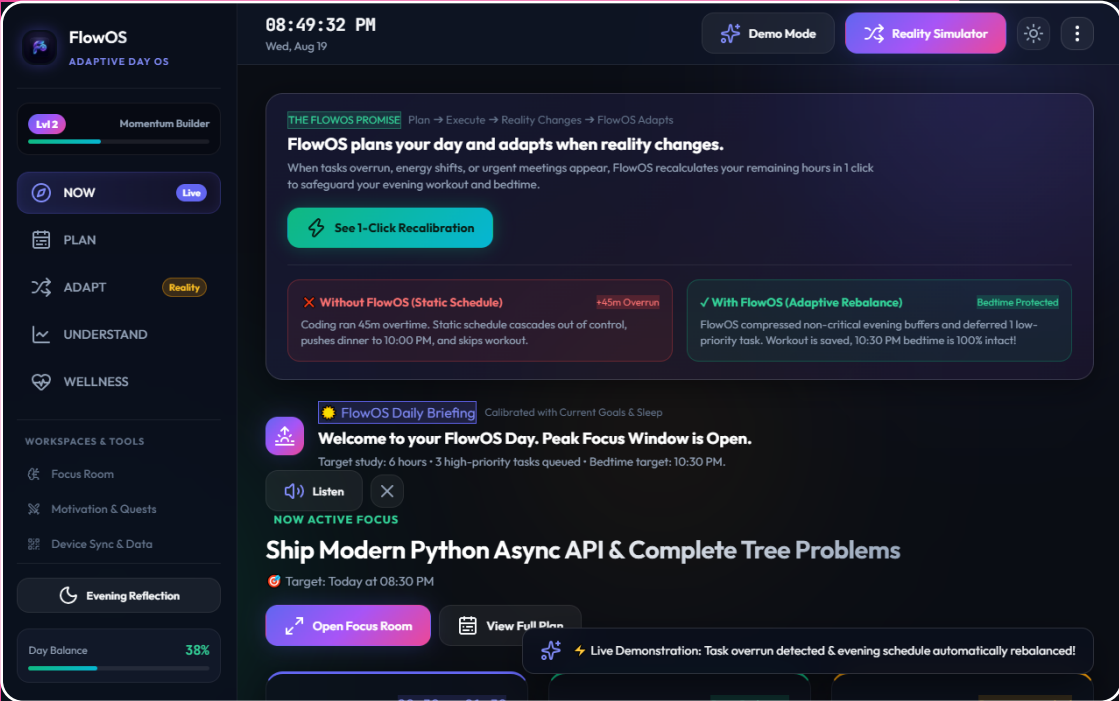

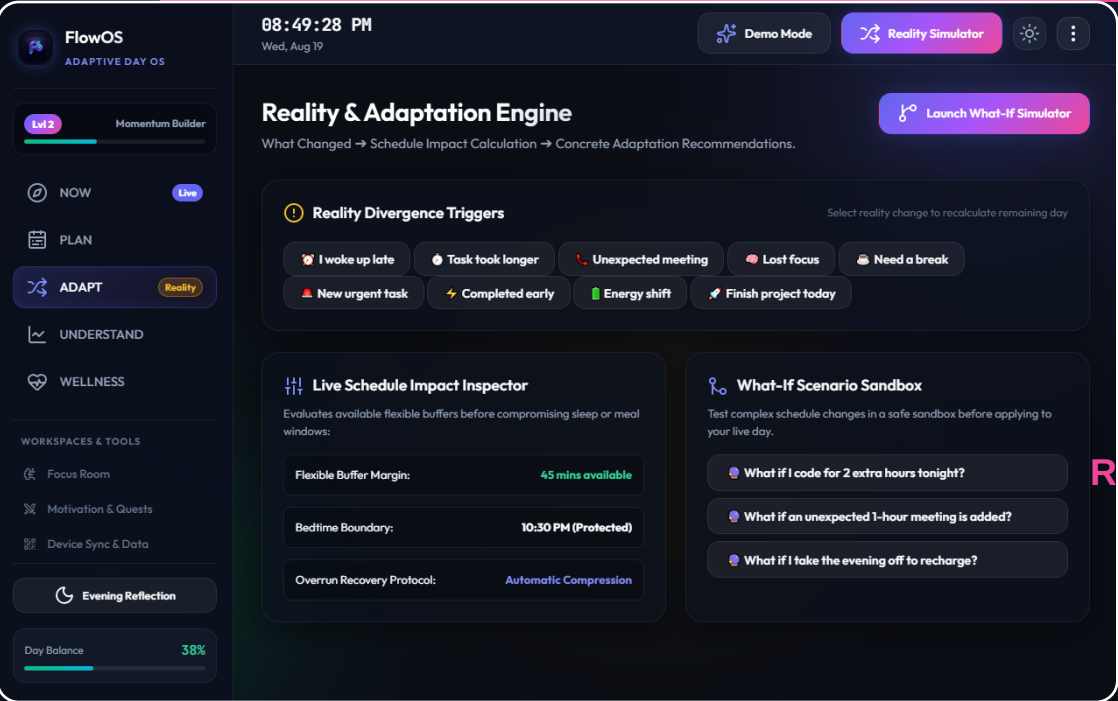

SO I BUILT FLOWOS.

A Day Operating System designed to adapt when reality changes.

WHAT HAPPENS WHEN THE PLAN BREAKS?

Log reality events. FlowOS automatically shifts remaining blocks.

One change shouldn't destroy the entire day.

Reality Triggers recalculate your plan dynamically, letting you proceed with full clarity.

WHAT IF I CHANGE THE PLAN?

Test schedule changes side-by-side without affecting your live day.

 **What-If Scenario Sandbox Simulator**

Spend extra hours coding

120

Simulate

 **What If: Spend an Extra 2 Hours on Core Mission Tonight?**

Simulating dedicating an additional 120m block to your primary project.

LIVE SCHEDULE

- Focus Block: 1h 00m
- Evening Review: 60m (07:00 PM)
- Bedtime: 10:30 PM

SIMULATED SCENARIO

- Extended Focus: 3h 00m (+2h)
- Evening Review: Condensed to 15m
- Bedtime: 11:00 PM (+30m drift)

 Bedtime wind-down pushes from 10:30 PM to 11:00 PM (+30m drift)

 Goal Velocity +25%: Will complete Milestone "FastAPI Architecture" today instead of Friday.

 **Apply Simulated Schedule to Live Day**

Discard Simulation

Try scenarios like:

- What if this coding block takes 2 hours?
- What if I add a last-minute team sync?

- What if I skip this workout to finish early?
- What if I extend my evening wind-down?

FlowOS — AI Day & Goal Operating System

Slide 5 of 7

MORE THAN A PLANNER.

FlowOS maps your biological rhythm, active work, and recovery.

■ PLAN

Goals

Goals → Milestones → Daily Schedule

■ ADAPT

Reality Triggers

Reality Triggers → Engine Recalibration

■ FOCUS

Focus Room

Focus Room → Procedural Web Audio

■ LEARN

Time Leakage

Time Leakage → Heatmap → Day Replay

■ ASSIST

AI Copilot

AI Copilot → Voice Intent Engine

■ OWN

Installable PWA

Installable PWA → Offline → JSON Sync

Your day doesn't have to be perfect.
Your system should be able to adapt.

FlowOS

AI DAY & GOAL OPERATING SYSTEM
